Abstract of **JP 2001340382 (A)**

**PROBLEM TO BE SOLVED:** To solve problems of a limit of enhancing an adhesion of a conventional absorbable article to a vaginal orifice and a wearing person's easy foreign matter feeling. **SOLUTION:** A liquid permeable layer 4 is provided between a surface sheet 5 and an absorption core 3. The layer 4 is formed of a network-like sheet having crimped fiber. Since the layer 4 is bulky and has a large volume feeling, a high adhesion can be obtained. Since the layer 4 has a high void fraction, it is gentle for a skin and gives a softer feeling. Accordingly, a physiological napkin free from the foreign matter feeling can be obtained.
